

Anaerobic Bioconversion for Sustainability

WHAT IS AD10 ?

A conference

The 10th Congress on Anaerobic Digestion (AD10) will consist of 3 parallel sessions that will be themed to address the topics listed in the call for papers. Also included in the program will be plenary conferences on technico-economical and political issues, and invited key-note scientific and technical presentations.

A discussion forum

It will be a unique opportunity to discuss research in and the practice of anaerobic digestion, conversion and remediation processes with researchers, industrial designers and contractors, present and future users, and government authorities. The program will also include Panel Discussions and Special Workshops on particular topics, e.g. Management and Treatment of Manures; Organic Municipal Waste Management: Landfills vs. Bioreactors; Strategies for a stronger integration of AD. Poster sessions are also included in the program.

A commercial forum

An exhibition related to the themes of the technical program of the Congress will be held at the same venue.

Networking opportunities

There will be a full program of social and networking events and sightseeing built into the AD10 program.

A tour on the field

A few post-conference technical visits to a variety of industrial facilities dealing with anaerobic wastewater treatment, municipal organic waste anaerobic digestion, and biogas recovery and purification are planned.

CALL FOR PAPERS

Papers and posters are invited on the following topics:

- Bacteriology, molecular microbiology and ecology of anaerobic bioprocesses.
- Technology development, evaluation and monitoring; on-site applications.
- Anaerobic treatment of municipal and industrial wastewater.
- All aspects related to stabilization/ digestion of sludge and solid waste.
- Anaerobic remediation of groundwater, sediment, soil.
- Pre- and post-treatment systems; biogas utilization.
- Policy making: criteria; economical & financial aspects; case studies.
- Potential and future in the context of sustainable development and energy policies.

SPONSORSHIP IS GREAT VALUE

When you think of marketing your brand you will see that sponsorship of AD10.Montreal2004 represents excellent value. This is the only time in 2004 you will be able to reach such a large group of persons who are all involved directly in and dedicated to the anaerobic approach (wastewater, municipal waste, agricultural waste, sustainable energy, business of the environment), at all levels of research, practicing, management, decision making, and on a worldwide basis – all in one go !

Organizations that conduct anaerobic treatment, remediation activities, and waste management, companies that supply scientific and technical equipment or service used in such work, and education and government institutions that have interests related to the topics are invited to exhibit at the Congress. Because the Exhibit Hall is centrally located, exhibitors will have the opportunity to present information to an audience of focused people, who acquire and use environmental management products and services around the world. Interested companies and institutions are invited to contact the secretariat:
